

BRING YOU

"Who you are, where you come from and what you think is valuable."

Nicole Kelp believes that many diverse voices are needed to solve the world's most pressing problems. Through her interdisciplinary science communication research lab, empowering communities to tackle public health challenges, and creating a groundbreaking medical school curriculum, Kelp is bringing those voices together.

A music minor in college, Kelp plays her piano to bring a fresh perspective – and her whole self – back to the heart of her work.

"You don't have to check your story at the door to assimilate into science culture—bring it. Science needs some new ideas."

What do you bring?
